The present invention tetates to nove induan secretes processing the ARR49145) and their coding sequences (ACC50344-ACC50856). The proteins and their coding sequences are useful for the preparation of a diagnostic or pharmaceutical composition for diagnosing or treating a cardiovascular disorder (e.g., arrhythmia, tachycardia, cardiac arrest, coronary carteriosclerosis and myocardial isordeers, reproductive disorders, immune system disorders, muscular disorders, pulmonary disorders, remained disorders, proliferative disorders and/or cancerous diseases and conditions, for conjustive disorders and/or cancerous diseases and conditions, for wound healing and epithelial cell proliferation, to treating or proliferation for treating thrombosis and arteriosclerosis, for treating or conference of the critical disorders or neurodegenerative conditions such as Alzheimer's disease and parkinson's neurodegenerative conditions such as Alzheimer's disease and parkinson's crimeurodegenerative or bone and periodontal regeneration and aid in tissue criminal are growth and differentiation of haematopoietic cells and bone are incombination with other cytokines, to maintain or gauss before transplantation or for supporting cell culture of primary cissues, to increase or decrease differentiation or proliferation of tissues, to increase or decrease differentiation or proliferation of cembryonic stem cells, and modulate mammalian characteristics or metabolism. The present sequence was used to illustrate the invention.

Compans before transplantation or for supporting cells and bone metabolism. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        5808 AAAATACAGAAATTAGCTGGGTGTGGTGCGTGCTGTAATCCCAGCTACTCGGGAGC 5867

ABZ71190-ABZ71478 represent cDNAs corresponding to 178 human secreted protein genes, and ABP00011-ABP00299 represent the proteins they encode. protein genes, and ABP00011-ABP00299 represent the proteins they encode. ABZ71479-ABZ71540 represent human secreted protein genomic fragments. The invention also encompasses antibodies specific for the secreted proteins, the use of the secreted proteins in drug screening, and recombinant convectors and host cells comprising a nucleic acid of the invention. The secreted proteins, uncleic acids encoding them, antibodies or antibody cragments specific for the secreted proteins, and modulators of protein activity are useful for diagnosing, treating, ameliorating or preventing activity are useful for diagnosing, treating, ameliorating or preventing cosephagus, stomach, small intestine, large intestine, liver, biliary cosephagus, stomach, small intestine, large intestine, liver, biliary cract and pancreas, and include cancers of these organs and tissues. The reatment of immune disorders, inflammation, infection, cractment of immune disorders, and to promote wound healing. Nucleic acids of the invention may be used for chromosome indentification, chromosome compaping, in gene therapy, for identifying individuals from minute consideration and prosent and manner of immune sequence represents a human secreted protein genomic markers. The present sequence represents a human secreted protein genomic markers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     5808 AAAATACAGAAATTAGCTGGGTGTGATGGTGCGTGCTGTAATCCCAGCTACTCGGGAGC 5867
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61 CTGAGGCAGGAGAACCTCTTGAATCCAGGAGGCGCAGGTTGCAGTGAGCAGAGTAGTGC 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1 AAAATATAAAAATTAGCCAGGCGTGATGTCATGTGCCTGTAGTCCCCAGCTACTCGGGAGG
                                                                                                                                                                                                                                       New human secreted proteins and nucleic acids, useful for detecting, preventing, diagnosing, prognosticating, treating and/or ameliorating e.g. gastrointestinal diseases and disorders, or cancers.

The invention relates to a novel human secreted polypeptide comprising a defined sequence given in the specification. The polypeptide, nucleic acid molecule, antibody, agonist or antibody, agonist or antibody, agonist or antibody, agonist or antibody, agonist or antibody, agonist or antibody, agonist or disposable of the invention may be useful for preparing a composition for disposable or treating a composition for disposable or treating a classification of disposable or shown as rheumatold arthritis, inflammation, Grave's disease, disposable or shown as rheumatold arthritis, inflammation, Grave's disease, classes, systemic lupus erythematosus or glomerulonephritis, neurodegenerative disorders including parkinson's disease and Alzheimer's disease, wounds and hyperproliferative disorders including arther since parasitic infections. The polypeptide may also be used during gene the polypeptide with a binding partner and determining whether the binding partner increases the activity of the polypeptide. The current sequence is that of the human secreted protein-related DNA of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             5808 AAAATACAGAAAATTAGCTGGGTGTGTATGGTGCGTGCCTGTAATCCCAGCTACTCGGGAGC 5867

ADB91834. Also disclosed is a recombinant vector comprising a polymerlectide of the invention, and a recombinant host cell comprising the recombinant vector. The polymeride of the invention is useful in identifying a binding partner. The polymeride of the invention is useful in identifying a binding partner by contacting the polymeride with a companient, and determining whether the binding partner increases or decreases activity of the polymeride. The polymeride, polymeride, antibody or its fragment, agonist or antagonist are useful for preparing antibody or its fragment, agonist or antagonist are useful for preparing conditions related to diabetes. The present sequence is that of the human immosplobulin Fc portion used to generate fusion proteins, increasing conditions the sequence data for this patent did not form part of the prince of the stability of the fused protein as compared to the secreted protein conly. Note: The sequence data for this patent did not form part of the prince of the prince of the patent of the patent of the patent of the prince of the prince of the patent of the patent of the patent of the patent of the patent of the patent of the patent of the patent of the patent of the patent of the patent of the patent of the patent of the patent of the patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of patent of pate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       acid encoding a human secreted protein is useful in diagnosing or g diabetes or conditions related to diabetes.

BP cDNA clone in ATCC deposit #28. ADD38134 standard; cDNA; 9796 21-MAR-2001; 2001US-0277340P. 19-JUL-2001; 2001US-0306171P. 13-NOV-2001; 2001US-0331287P. 19-MAR-2002; 2002WO-US008279 (HUMA-) HUMAN GENOME SCI INC. hypersensitivity disorders. (first entry) Rosen CA, Ruben SM; WPI; 2003-140218/13. Query Match Best Local Similarity from ATCC deposit. WO200290526-A2. Homo sapiens 14-NOV-2002 15-JAN-2004 ADD38134; RESULT 

The present invention relates to an isolated polypeptide or human secreted protein. The polypeptides, nucleic acid molecules, antibodies or their fragments, and agonists or antagonists that bind are useful for their fragments, and agonists or antagonists that bind are useful for preparing a diagnostic or pharmaceutical composition for diagnosing or treating allergic or asthmatic disorders. The polypeptide is also useful for identifying a binding partner by contacting the polypeptide with a contact partner increases or decreases the activity of the polypeptide. The polypeptide and nucleic acid molecules are also useful for detecting, preventing, diagnosing, contacting interaction, immune disorders, or ameliorating inflammatory disorders or prognosticating, treating or ameliorating inflammatory disorders infectious diseases, wound healing and disorders of epithelial cell proliferation, immune disorders, cardiovascular disorders, or gastrointestinal continuation in the nucleic acids are also useful for chromosome diseases, endocrime disorders, or mapping, as molecular weight markers, or as hybridization or diagnostic mapping, as molecular weight markers, or as hybridization or diagnostic mapping, as molecular weight markers, or as hybridization or diagnostic immunological probes for differential identification of the tissues immunological probes for differential identification of the tissues immunological probes in the present sequence represents a cDNA clone from the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the c New human secreted proteins and nucleic acid molecules, useful for preparing a diagnostic or pharmaceutical composition for diagnosing or treating allergic or asthmatic disorders, or related immediate human secreted protein; Antiallergic; Antiinflammatory; Antibacterial; Anti-HIV; Cytostatic; Immunosuppressive; Hemostatic; ss. This is the 5' sequence of the clone insert Clone from S. Wiemann,
This is the 5' sequence of the clone insert Clone from S. Wiemann,
This is the senome Analysis, German Cancer Research Center (DKFZ);
Email s.wiemann@dkfz-heidelberg.de; sequenced by BMFZ (Biomedical
Research Center at the Heinrich-Heine-University,
Duesseldorf/Germany) within the CDNA sequencing consortium of the
German Genome Project. This clone (DKFZP6459P1831) is available at
the RZPD in Berlin. Please contact the RZPD: Ressourcenzentrum,
Heubnerweg 6, 14059 Berlin-Charlottenburg, GERMANY; Email:
clonedzpd.de Further information about the clone and the
sequencing project is available at

/note="Organ: Lung; Vector: pXx-Asc; Site 1: EcoR I;
Site_2: Not I; The library was constructed according
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarose
gel. First strand cDNA synthesis was primed with oligo-dT
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction, ligated
with EcoR I adaptor, digested with Not I and then cloned
directionally into pXX-Asc vector. The library tag
sequence located between the Not I site and the polyA tail

Patent No. 6812339

GENERAL INFORMATION:
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

CURRENT FILING DATE: 2000-04-14

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: FRASESQ for Windows Version 4.0

Sequence 17299, Application US/09949016

Patent No. 6812339

GENERAL INTORMATION:

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION OF THE OF THE 2000-04-14

PRIOR REPLICATION NUMBER: 60/241, 755

PRIOR APPLICATION NUMBER: 60/237,768

PRIOR APPLICATION NUMBER: 60/237,768

patent No. 681239

GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHIGNS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
FILE REFERENT APPLICATION NUMBER: US/09/949,016
CURRENT APPLICATION NUMBER: US/09/949,016
CURRENT PILING DATE: 2000-04-14
PRIOR FILING DATE: 2000-10-03
PRIOR PELING DATE: 2000-10-03
PRIOR PILING DATE: 2000-10-03
PRIOR APPLICATION NUMBER: 60/231,768
PRIOR FILING DATE: 2000-0-09-08
NUMBER OF SEQ ID NOS: 207012
SOFTWARE: PRESEEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GENERAL INFORMATION:

APPLICANT: Wang, David G.

TITLE OF INVENTION: Identification and Mapping of Single Nuclectide
ITILE OF INVENTION: Identification and Mapping of Single Nuclectide
ITILE OF INVENTION: Polymorphisms in the Human Genome
FILE REFERENCE: 108827.129

CURRENT APPLICATION NUMBER: US 60/218,006

Licet Submission

Submitted (22-SEP-1998) Whitehead Institute/MIT Center for Genome Submitted (22-SEP-1998) Whitehead Institute (3141, USA On Sep 13, 1998 this sequence version replaced gi:3581743.

All repeats were identified using RepeatMasker: Smit, A.F.A. & Green, J. P. (1996-1997).
                                                                                                                                                                                                                                                                                                                                                                   Only the first 147416 bases of this clone are being submitted. Bases 145417-155040 overlap accession number AC004147 (WICGR project L228). The first 2Kb of the overlapping region are submitted to confirm overlap.

Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Web site: http://www-seg.wi.mit.edu
